Care Instructions

Warm Nordic's furniture is high quality when it comes to design and functionality.

With correct maintenance, the furniture will remain in good condition for many years to come. We advise that you follow the accompanying guidelines to care for and clean the furniture. This ensures extended lifetime.

We have chosen materials which age beautifully, but please be aware that all materials undergo changes to their nature over time when exposed to light, dust and use.

General advice

Avoid placing furniture close to solid fuel stoves and radiators, as the heat source may dry out the wood and cause the formation of cracks. Avoid placing warm and damp or wet objects on the wood as this can cause blotches to form. Always remove stains and liquids immediately to avoid these penetrating the material and leaving marks. Avoid dragging things across the surface as this can cause scratches. Do not stand on the furniture.

Oiled oak

Oiled oak has a warm glow, which achieves a beautiful patina with regular maintenance.

Regular cleaning: To be wiped with a clean, lint-free cloth wrung out in warm water. Wipe with a dry cloth.

Do not use dish-soap or other detergents to clean and do not use abrasives such as scouring creams, steel wool or scouring sponges as these will cause scratches and drying out.

Maintenance: We recommend that the surface is treated at regular intervals with an oil specially designed for oil treated furniture.

French cane

Regular cleaning: To be wiped with a clean, lint-free cloth wrung out in warm water. Add a neutral detergent if necessary. Wipe with a dry cloth. Always remove stains and liquids immediately to avoid these penetrating the material and leaving marks.

Powder coated steel

Regular cleaning: To be wiped with a clean, lint-free cloth wrung out in warm water. Add a neutral detergent if necessary. Wipe with a dry cloth. Always remove stains and liquids immediately to avoid these penetrating the material and leaving marks. Do not use alcohol or any other solvents. Do not use abrasives such as scouring creams, steel wool or scouring sponges as these will cause scratches.

Note! Lacquered steel can withstand almost anything, but moisture can cause discolouration and oxidising may occur.
