

Ampi facilitates the supply of power and data to the workstation. When closed, it takes on the appearance of a carefully designed, harmoniously proportioned object, whose function is not apparent at first glance. The top with its raised edge serves as a wireless charger for smartphones etc. A drawer opens out to the front, offering access to two power sockets and two USB-A connections, in addition to a USB-C connection.

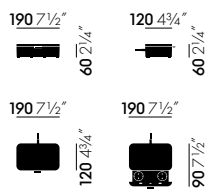

This makes it possible to quickly convert any home office table into a fully electrified workstation, while in the workplace, Ampi grants the flexibility that is essential today, without any costly table modifications or complex cabling.

Ampi has a non-slip base and comes in a selection of colours. The power sockets are adapted to the norms existing in the respective sales region.
