

## AERO

design Shibuleru

Bookshelf consisting of contoured double-panelled shelves thickness 18 mm, constituted by a 7 cm frame in solid beech wood and board honeycomb, enclosed by two aluminium plates, fitted with holes and bushings to allow the fixing of the posts. Finish in anti-scratch matt painting in black or white RAL 9001 White Cream color, or Cement Effect finish available in two colors, Chiaro and Scuro.

Steel posts Ø22 mm, with inserted fixing element and integrated height-adjustable plastic feet, finish with epoxy powder coating in RAL 9010 white or RAL 9017 black or Gunmetal grey colour for the Cement Effect version only. Only the 150 cm version is fitted with 2 supplementary steel supports with integrated height-adjustable plastic feet, secured to the bottom shelf and finished with epoxy powder coating in RAL 9010 white or RAL 9017 black.

## Technical Drawings

## Notes

Aero has been submitted to and passed the maximum total load tests (UNI 8606:1984), with the issuance of the relevant certificate by CATAS®.

"CEMENT EFFECT" FINISH: finish obtained by cement-based materials applied manually, after sanding the surface, through different phases: 2 layers of primer coating applied with a brush and roller; 2 layers of the cement applied with a specific spatula -each stage is spaced by a 24h drying cycle, and further sanding before proceeding to the next phase - and final phase of 2 protective finishes, applied with a brush, as stain-resistant treatment, which prevents the immediate absorption of stains.

The cement finish is furthermore protected with an acrylic paint finish, which provides the surface a good scratch resistance. A subsequent application of nano-molecular varnish, protects the finish from chemical agents, especially of food nature. The handcraft and preciousness of this application, creates finishes and surfaces which may differ from each other for finishing and shades of colours. This feature shows the exclusivity and craftsmanship of each creation.

The scratch-resistant coating increases scratch resistance compared to standard coatings, but doesn't completely eliminate the possibility of scratches on the surface.
