

## CEIBA

design Luis Arrivillaga

Coat-hanger composed by four "C-shaped" elements, of various heights, joined together by means of a central pin that, through a "compass" opening, allows to place each element in various positions; the recommended opening angle between elements is 90°.

The structure, made by a CNC machine then manually finished, is in solid ash wood, Ø30 mm, with natural colour with acrylic water based finish, or charcoal dyed or tobacco dyed, with acrylic painting finish. The spacer rings, Ø30 mm, placed between each element, are in black phosphate coated steel. Floor support provided by plastic tips.

### Notes

Wood is a living material; therefore, it can have slight color and dimension changes. The presence of any non-homogeneous color shades is not to be considered a defect but a quality. Please note that the direct sunlight exposure may alter the wood color; therefore, we recommend the periodic position shift of the objects placed on the furniture for the first months to avoid differences in shades between exposed and covered portions.
