

MOODMOON  
SEBASTIAN HEPTING 2021

Analogy meets digital elements. Poetry meets technology. MOODMOON is a decorative wall lamp that combines innovation and tradition in the interplay of LED technology and Japanese paper. Via an app, users can choose from 14 different lighting moods and colour gradients and change the atmosphere of a room according to their own sensibilities. In this way, the MOODMOON moods, which are partly static and partly moving, can be adapted to personal needs. The designer Sebastian Hepting, who has been part of the Ingo Maurer team for 17 years, developed the idea for the MOODMOON luminaire in times of the Lockdown 2020, in which the home is used for different purposes - from work to homeschooling and place of relaxation - and the demands on light are very versatile. MOODMOON focuses on the individual well-being of people and thus reflects the concept of Human Centric Lighting.

**Light source**

LED strips RGBW, EEC G (A-G). LEDs cannot be replaced by the user, but can be replaced by specialists.

**Technical data**

100-240 Volt 50/60Hz

**More info**

Direct connection to a wall outlet possible (installation height 5 cm). Individually controlled RGBW LEDs can reproduce pre-programmed and stored lighting scenes. The moods can be selected and dimmed using the free Ingo Maurer Digital app. The luminaire contains a WLAN module. Integration into an existing Wi-Fi network is possible.

**Colours**

Wall element, cable and Japanese paper are white.
